PROFESSIONAL SUMMARY

Results-driven Backend Software Engineer with 4+ years of experience in Java, Spring Boot, and Big Data engineering, specializing in real-time data pipeline development for high-volume social media data streams. Proven track record of building and deploying scalable pipelines on the Gathr platform within HDFS/YARN cluster environments, with strong hands-on expertise in Apache Kafka for stream processing and HBase for NoSQL storage. Experienced with DevOps practices (Jenkins, Docker, Kubernetes) and Generative AI application development, including a production RAG-based chatbot for call center automation. Adept at owning services end-to-end in fast-paced Agile environments, from design through production support.

TECHNICAL SKILLS

Programming & Big Data: Core Java, J2EE, Spring Boot, Apache Kafka, HDFS, YARN, Gathr Platform, Apache Spark

Database & NoSQL: HBase, MySQL (RDBMS)

Tools & Platforms: Klera, Gathr, Postman, WinSCP, Offset Explorer

DevOps: Jenkins, Docker, Kubernetes

IDE: IntelliJ IDEA, Windsurf

Version Control: Git, SVN

AI Tools: Google Gemini, GitHub Copilot, AWS AI Services

PROFESSIONAL EXPERIENCE

Impetus Technologies (India) Pvt. Ltd.

Senior Software Engineer | March 2022 – Present | India

Project: Metatrail | Java, J2EE, Spring Boot, Hadoop, HBase, Gathr, Klera, Kafka

Researched and delivered optimum solutions for a large-scale social media Big Data problem, focused on stream processing, transformation, and scalable storage. The core solution leverages the Gathr platform for pipeline creation — reading high-velocity, real-time data streams from Kafka, applying complex business logic, filters, and aggregations, and storing structured output in HBase — running within an HDFS/YARN cluster environment for resource governance and massive parallel processing.

- Engineered and released a production-grade data pipeline on the Gathr platform, processing ~650 million social media records per day for transformation and analysis.
- Owned end-to-end delivery of a Java-based business service for HBase data retrieval — from design through production release — improving data retrieval performance by 60%.
- Validated and deployed data pipelines and services into production through rigorous testing, ensuring reliable, high-quality releases with minimal post-deployment issues.
- Diagnosed and resolved critical bugs and performance bottlenecks across pipelines and services, strengthening overall system reliability and reducing production support overhead.

Project: RAG-based Call Center Chatbot | AWS, RAG, Generative AI

- Designed and built a Retrieval-Augmented Generation (RAG) chatbot on AWS to automate FAQ handling for call center support, reducing average query resolution time by 70%.
- Leveraged Google Gemini and GitHub Copilot to accelerate development cycles and improve solution design and code quality.

EDUCATION

Bachelor of Technology in Computer Science

Sage University, Indore | 2018 – 2022

12th Standard

Jawahar Navodaya Vidyalaya, Indore | 2017 – 2018
